Putting Health Information into Action to Solve the Patient Puzzle

Since 2010, a number of GCC countries have embarked on their national/regional Health Information Exchange journey to follow the steps of advanced healthcare ecosystems such as US, Canada, UK, Australia and Singapore.

As a recognition of the importance of this issue, Emirates Health Informatics Society along with the GCC Taskforce on Workforce Development in Digital Healthcare will be organizing a round-table on Health Information Exchange as a side activity during the 1st GCC eHealth Workforce Development Conference.

At the **HIE roundtable**, which will be held on November 28th, 2018, you can discover how government agencies, payers and providers across different GCC countries are architecting or even implementing their vendor-neutral HIE to provide a clinical 360 degree view of patients data who are shopping for care services across public and private healthcare providers. HIE is also becoming irreplaceable in terms managing population health and unlocking valuable insights for policy-making and healthcare budget planning.

This round-table would be a great opportunity to meet the leader and decision-makers on HIE to discuss key success factors of such projects such as care-coordination, sustainability, benefit-realization, change management workforce up-skilling.

The round-table will be chaired by **Dr Doug Fridsma**, President of the American Medical Informatics Association and co-chaired by **Dr Ahmed Belkahir**, Director of the National eHealth Strategy and Change Management Office, Ministry of Health, Kingdom of Saudi Arabia and **Dr Mohammed Al Redha**, Director of Informatics & Smart Health Department at Dubai Health Authority. Representative from HIE committees Ministry of Health, (UAE) and Department of Health Abu Dhabi will be attending.

Only 5 places available to book.
