

Competency-based Framework for eHealth Career Paths Workshop

As e-health technologies expand across the GCC region, human resources are the most critical prerequisite for the successful digital healthcare transformation. Digital health require a well-trained and highly skilled workforce that progresses through well-defined career path. A half-day workshop is put forward to exchange views and experiences on current trends and challenges associated with developing a competency-based framework for career paths on Biomedical & Health Informatics disciplines, Health Information Management, Healthcare IT, Health Data Science and Revenue Cycle Management professions.
